CMSE 801 - Day 12

Using Pandas to manipulate, clean, and explore data

Feb 19, 2026

General Course Announcements

- Quiz 1 Graded.
 - If you have any questions about the quiz or want to discuss problems you ran into, please contact me or come to office hours.
 - Partial credit will be given where possible!
- Homework 1 due this Saturday 2/21
- Homework 2 due next Saturday 2/28

Questions/comments from Day 12 PCA

- Getting used to Pandas:
 - Questions about the difference between using `.loc` (label-based) and `.iloc` (index-based) and how to use each (especially using `,` and `:`)
 - Questions about accessing the row labels and column labels
- box plots

Loading the modules and then the heart disease example data

In [1]:

```
# import numpy
import numpy as np

# import matplotlib
import matplotlib.pyplot as plt

# Look at the Pandas import -- we take a similar approach to how we import numpy
# "pd" will be the short-hand for accessing Pandas functions.
import pandas as pd

# Because we're looking data stored directly in this notebook, we need one other module as well
from io import StringIO

# read in some data on heart disease (don't worry too much about what "json" is!)
heart_disease_data = pd.read_json(StringIO("""{"observation_number":0,"age":67,"sex":1,"cp":4,"trestbps":160,"chol":286,"fbs":0,"t"
```

Let's explore the data bit

In [2]:

```
heart_disease_data.head()
```

Out[2]:

	observation_number	age	sex	cp	trestbps	chol	fbs	restecg	thalach	exang	oldpeak	slope	ca	thal	num
0	0	67	1	4	160	286	0	2	108	1	1.5	2	3.0	3.0	2
1	1	67	1	4	120	229	0	2	129	1	2.6	2	2.0	7.0	1
2	2	37	1	3	130	250	0	0	187	0	3.5	3	0.0	3.0	0
3	3	41	0	2	130	204	0	2	172	0	1.4	1	0.0	3.0	0
4	4	56	1	2	120	236	0	0	178	0	0.8	1	0.0	3.0	0

In [3]:

```
heart_disease_data.describe()
```

Out[3]:

	observation_number	age	sex	cp	trestbps	chol	fbs	resting_ecg
count	302.000000	302.000000	302.000000	302.000000	302.000000	302.000000	302.000000	302.000000
mean	150.500000	54.410596	0.678808	3.165563	131.645695	246.738411	0.145695	0.986722
std	87.324109	9.040163	0.467709	0.953612	17.612202	51.856829	0.353386	0.994907
min	0.000000	29.000000	0.000000	1.000000	94.000000	126.000000	0.000000	0.000000
25%	75.250000	48.000000	0.000000	3.000000	120.000000	211.000000	0.000000	0.000000
50%	150.500000	55.500000	1.000000	3.000000	130.000000	241.500000	0.000000	0.500000
75%	225.750000	61.000000	1.000000	4.000000	140.000000	275.000000	0.000000	2.000000
max	301.000000	77.000000	1.000000	4.000000	200.000000	564.000000	1.000000	2.000000

What if I just want to access some columns of data?

In [4]:

```
heart_disease_data['age']
```

Out[4]:

```
0    67  
1    67  
2    37  
3    41  
4    56
```

```
..  
297   45  
298   68  
299   57  
300   57  
301   38
```

Name: age, Length: 302, dtype: int64

In [5]:

```
heart_disease_data['trestbps']
```

Out[5]:

0	160
1	120
2	130
3	130
4	120
	...
297	110
298	144
299	130
300	130
301	138

Name: trestbps, Length: 302, dtype: int64

I can use this sort of data access to quickly make plots of one column against another

In [7]:

```
plt.scatter(heart_disease_data['age'], heart_disease_data['trestbps'])  
# plt.plot(heart_disease_data['age'], heart_disease_data['trestbps'], ls="", marker="o")  
plt.xlabel("age")  
plt.ylabel("resting heart rate")
```

Out[7]:

Text(0, 0.5, 'resting heart rate')

Accessing the data in other ways (e.g. using `.loc` and `.iloc`)

Important note: when using `.loc` and `.iloc`, the first value you provide is to access **row** information, the second value is to access **column** information.

In [8]:

```
heart_disease_data.head()
```

Out[8]:

	observation_number	age	sex	cp	trestbps	chol	fbs	restecg	thalach	exang	oldpeak	slope	ca	thal	num

slope                 3
ca                    0.0
thal                  3.0
num                   0
Name: 2, dtype: object

```

In [14]:

```
heart_disease_data.head()
```

Out[14]:

	observation_number	age	sex	cp	trestbps	chol	fbs	restecg	thalach	exang	oldpeak	slope	ca	thal	num
0	0	67	1	4	160	286	0	2	108	1	1.5	2	3.0	3.0	2
1	1	67	1	4	120	229	0	2	129	1	2.6	2	2.0	7.0	1
2	2	37	1	3	130	250	0	0	187	0	3.5	3	0.0	3.0	0
3	3	41	0	2	130	204	0	2	172	0	1.4	1	0.0	3.0	0
4	4	56	1	2	120	236	0	0	178	0	0.8	1	0.0	3.0	0

In [15]:

```
heart_disease_data.iloc[2,4] # This is "index-based" access. I'm accessing the row at index 2  
                             # and then the column at index 4
```

Out[15]:

130

I can also get tricky and use the ":" to access a larger subset of the data

In [16]:

```
heart_disease_data.head()
```

Out[16]:

	observation_number	age	sex	cp	trestbps	chol	fbs	restecg	thalach	exang	oldpeak	slope	ca	thal	num
0	0	67	1	4	160	286	0	2	108	1	1.5	2	3.0	3.0	2
1	1	67	1	4	120	229	0	2	129	1	2.6	2	2.0	7.0	1
2	2	37	1	3	130	250	0	0	187	0	3.5	3	0.0	3.0	0
3	3	41	0	2	130	204	0	2	172	0	1.4	1	0.0	3.0	0
4	4	56	1	2	120	236	0	0	178	0	0.8	1	0.0	3.0	0

In [17]:

```
heart_disease_data.iloc[2:4,4:9]
```

Out[17]:

	trestbps	chol	fbs	restecg	thalach
2	130	250	0	0	187
3	130	204	0	2	172

In [18]:

```
heart_disease_data.loc[2:4,"age":"trestbps"]
```

Out[18]:

	age	sex	cp	trestbps
2	37	1	3	130
3	41	0	2	130
4	56	1	2	120

How do I get access to the row labels and columns labels?

In [19]:

```
heart_disease_data.index
```

Out[19]:

```
RangeIndex(start=0, stop=302, step=1)
```

In [20]:

```
heart_disease_data.index.values
```

Out[20]:

```
array([ 0,  1,  2,  3,  4,  5,  6,  7,  8,  9, 10, 11, 12,
        13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25,
        26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38,
        39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51,

```

In [21]:

```
heart_disease_data.columns
```

Out[21]:

```
Index(['observation_number', 'age', 'sex', 'cp', 'trestbps', 'chol', 'fbs',  
      'restecg', 'thalach', 'exang', 'oldpeak', 'slope', 'ca', 'thal', 'num'],  
      dtype='object')
```

Boxplot

In [23]:

```
plt.boxplot(heart_disease_data['trestbps']);
```

Goals for today

- Load and explore some data using **Pandas**. (specifically, global GDP data)
- Manipulate that data to clean it up and re-organize it to make it easier to analyze
- Visualize that data using matplotlib or some of the built-in Pandas functions

Looking forward - Day 13 PCA: Reviewing normal distributions, how to "mask" data in Python, and making logarithmic plots

- You'll explore what is meant when people talk about data having a "normal" distribution
- You'll practice "masking" data using Python
- You'll practice making a logarithmic plot, which can be better for visualizing data with a large range of values.
